

**BRICCOLI**  
MODELLERIA

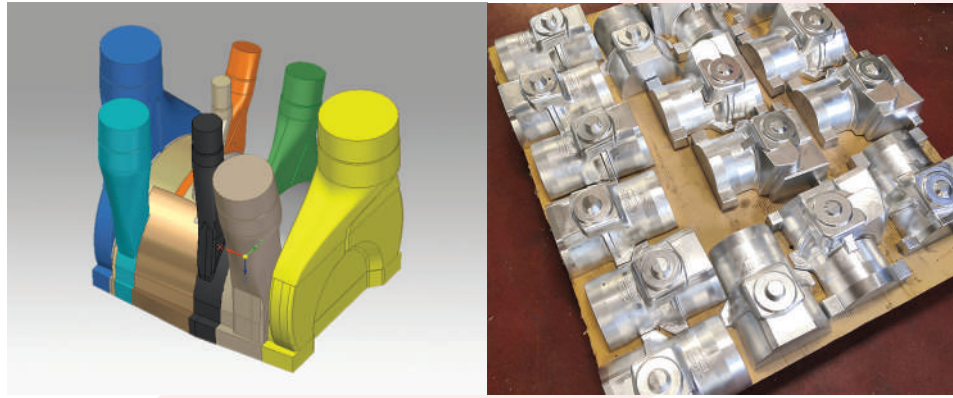

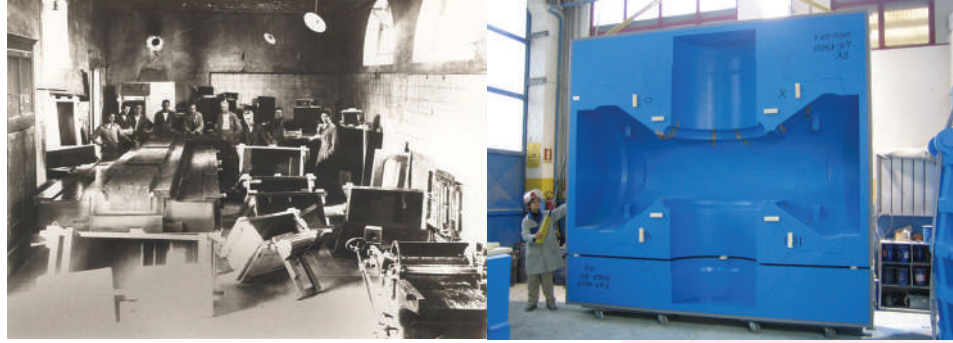

**BRICCOLI S.r.l. SINCE 1885**

DESIGN AND PRODUCTION OF PATTERNS,  
MOULDS AND FOUNDRY EQUIPMENT

## ABOUT US

The G. Briccoli company was established in 1885 as a small artisan company and is at the heart of what would later, following long and constant growth, become Briccoli Srl.

Pattern making is a compelling field where the product takes shape from skilled hands, which transform the lines of a drawing into a physical object: experience and passion are the key elements in building the right things. The experience it has gained in its history and the technological investments have enabled it to evolve dynamically and flexibly on the market, enabling it to respond immediately to a target with different experiences, delivering high-quality products while respecting delivery times.

## PRODUCTION

We manufacture industrial patterns for foundries with various materials of disparate size and complexity, combining artisan tradition with modern technology.

Our production operations are aimed at the Italian and European market. We operate as a supplier in the manufacturing chain, with particular reference to production operations such as:

- Foundries
- Steel mills
- Mechanical industries

## OTHER MACHINING

The company Briccoli is able to produce precise mechanical details for various application fields:

- Rotational moulds
- Moulds for automotive and nautical industries
- Gauges
- Fixtures and Gauges
- Waterjet cutting equipment and laser cutting supports
- Prototypes
- Models
- Composites machining (carbon/glass fiber)

We have five 5-axis CNC machines and CAD/CAM workstations, constantly updated, to respond completely to every type of customer need.
